Professional Summary

Software Development Engineer with **2+ years** of experience designing and delivering **scalable, high-performing, and fault-tolerant backend systems** across production SaaS platforms. Proven ability to own and ship full-cycle software solutions — from system design and API architecture to distributed queue processing and real-time event pipelines — serving **500+ users** and handling **millions of events per day**. Proficient in **Python, PHP (Laravel), Go, SQL**, and **JavaScript** with hands-on experience in **distributed systems, microservices, event-driven architecture**, and **performance optimization**. Passionate about writing clean, maintainable, production-grade code and building reliable systems that scale.

Technical Skills

Languages: Python, PHP, Go, JavaScript, SQL

Backend & System Design: Microservices, Distributed Systems, Event-Driven Architecture, REST APIs, System Design, Scalable Architecture, JWT, RBAC

Frameworks: Laravel, jQuery, Bootstrap, AJAX

Databases & Caching: MySQL, Redis (Caching, Pub/Sub, Queues)

Real-Time & Messaging: WebSockets, Laravel Reverb, Pusher, FCM, Redis Pub/Sub

Reliability & Performance: Queue-Based Processing, Batch Processing, Query Optimization, Indexing, Retry Logic, Idempotent APIs

APIs & Integrations: WhatsApp Cloud API, SMTP/IMAP, Webhooks, Firebase

Engineering Practices: Git, GitHub, Linux, Agile/Scrum, Code Reviews, Postman, VPS

Professional Experience

Digital Kuppam *Software Development Engineer*

Dec 2023 – Present *Kuppam, Andhra Pradesh*

- Owned **end-to-end design and delivery** of 6+ production SaaS applications in Laravel and Python, serving 500+ active users across HR, messaging, and email domains — from architecture through deployment
- Designed and implemented **distributed, event-driven backend systems** using Redis Pub/Sub, WebSockets, and Laravel queue workers; reduced real-time notification delivery latency by processing events asynchronously at scale
- Architected **fault-tolerant queue pipelines** with retry logic and idempotent job processing using Laravel Jobs and Redis, enabling reliable high-throughput data workflows without data loss under failure
- Designed **secure, scalable REST APIs** with JWT authentication and RBAC; applied query optimization, composite indexing, and schema design best practices to improve MySQL performance for analytics-heavy workloads
- Wrote **Python automation services** for biometric data ingestion, validation, and transformation — reducing manual data processing effort and improving data accuracy across operational systems
- Conducted **code reviews**, enforced engineering best practices, and collaborated with stakeholders to translate business requirements into robust technical solutions within Agile sprint cycles

Data Lense Service Pvt Ltd *Software Engineer Intern*

May 2023 – Nov 2023 *Bangalore, Karnataka*

- Contributed front-end and back-end features to 3+ production applications using Laravel, JavaScript, and SQL; code shipped to live environments within 6 months of joining
- Improved data pipeline reliability by 30% by implementing structured input validation and query optimization for reporting workflows
- Participated in Agile ceremonies (sprint planning, standups, retrospectives) and peer code reviews; developed responsive UI components using HTML, CSS, and Bootstrap

Key Projects

Gotit — Scalable HR Platform with Distributed Attendance Processing

Oct 2024

Tech Stack: Laravel, Python, Firebase, Redis, WebSockets, MySQL

- **Designed and owned** the full system architecture of an end-to-end HR platform handling onboarding, attendance, shift management, and approvals for 200+ employees
- Built a **distributed data ingestion service** in Python (ADMS protocol) to pull real-time attendance events from biometric hardware, applying validation, deduplication, and anomaly detection before persisting to MySQL
- Unified 3 attendance input sources (biometric, geo-location, QR) into a **single normalized data model** — solving data inconsistency and enabling reliable cross-source reporting
- Delivered **real-time dashboard updates** via WebSockets and FCM with sub-second latency; built an automated reporting engine generating scheduled HR analytics summaries

Chatygo — High-Throughput WhatsApp SaaS Backend

Nov 2024 – Mar 2026

Tech Stack: Laravel, PHP, WhatsApp Cloud API, WATI, Redis, MySQL, WebSockets

- **Architected and delivered** a multi-tenant WhatsApp SaaS platform with a multi-agent inbox, chatbot builder, and bulk campaign engine — designed for **horizontal scalability** across customer tenants
- Designed a **high-throughput webhook event processing layer** to ingest, validate, and store thousands of inbound/outbound WhatsApp message events per hour with consistent delivery guarantees
- Implemented **Redis-backed distributed queue pipelines** for campaign scheduling and message delivery, decoupling producers from consumers to ensure fault tolerance under traffic spikes
- Built a **real-time analytics system** aggregating delivery, open, and response rate metrics from MySQL event datasets — enabling data-driven campaign decisions for end users

KYN (Know Your Network) — Large-Scale Email Delivery & Event Platform

Apr 2026 – Present

Tech Stack: Laravel, Python, Go, Redis, MySQL

- **Owned the design and implementation** of a scalable email delivery platform with **queue-based batch processing pipelines** engineered to handle millions of email send and tracking events per day
- Built a **Go-based high-performance tracking microservice** for real-time open/click event capture — chosen for Go's concurrency model to handle high inbound event throughput with low latency
- Developed a **Python IMAP ingestion service** to parse and classify inbound email events (replies, bounces, unsubscribes) with idempotent processing and CAN-SPAM/GDPR compliance enforcement
- Implemented **sender reputation management**, IP warmup scheduling, A/B test aggregation, and pre-send infrastructure validation (SPF/DKIM) — improving deliverability and system reliability at scale

Education

Kuppam Engineering College (JNTUA)

B.Tech — Computer Science & Engineering

Oct 2020 – May 2024 *GPA: 7.98*

Certifications

- **NPTEL:** Software Project Management

- **NPTEL:** Cloud Computing
- **TCS iON:** Career Edge — Young Professional
- **HackerRank:** SQL Basics
